

DID YOU KNOW

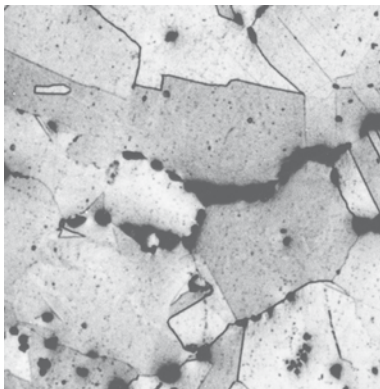

IRL saves manufacturers money by testing their products for the impact of vibration, fatigue, water, stress and shock to ensure they are durable, safe and provide world-leading performance.

This expertise can be applied to diverse industries – from finding out whether rubber components contain toxic volatiles to ensuring that materials used in plastic shower linings are chemically resistant to common household cleaning agents.

WHAT DOES THIS MEAN?

Testing and analysis can save companies money up front, by providing accurate information about what will work and what won't. When things fail or go wrong, IRL can find out why and offer solutions that improve products and minimise insurance and litigation claims.

Being able to meet the highest international standards gives New Zealand products a significant edge in a global marketplace flooded with low-quality, low-cost competition.
